

Introduction

is a group of components to add reporting capabilities to applications.

It uses a visual designer to create banded reports and includes a report engine with previewer and an interpreter to run user scripts.

The report designer can be invoked at runtime.

Iz_Report has the ability to save the report displayed in the preview window using a user-defined format.

It has an extension mechanism (addons) with support for plugins that can be used to add any amount of export filters.

An export filter is a specially designed class which is registered in Iz_Report and allows you to save the report using one or more formats.
